

# My Polar Bear Report

By Finn

Introduce the animal.

Would you like to know

about polar bears?

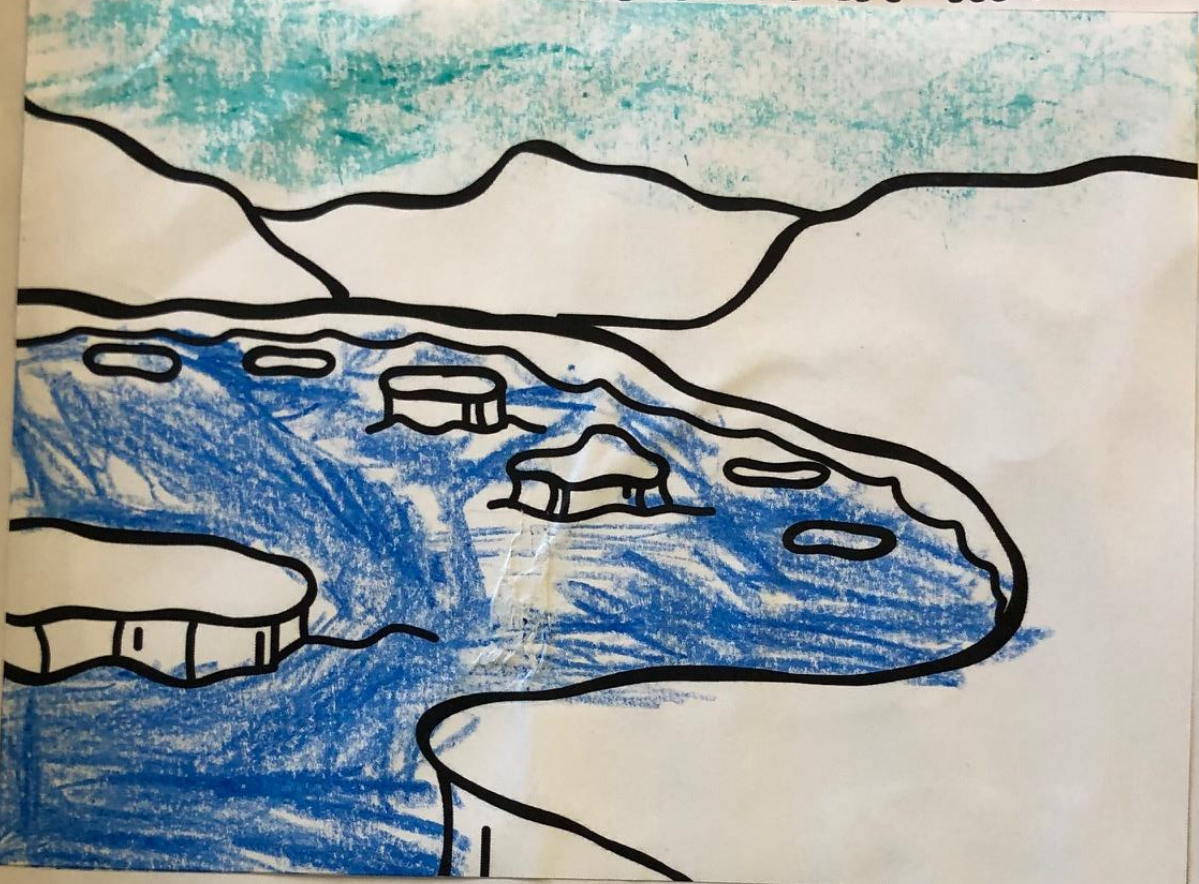

They are so cool!

# Where does it live?

They live in the  
arctic, Canada, Alaska,  
and Norway.

What is the habitat like?

There are long winters

short summers, and day

without the sun.

# What does it eat?

Polar Bears are carnivores.  
they eat seals, walrus,  
and caribou.

# Who are the predators?

There are not  
any natural predators  
to the Polar bear

# What about the baby?

A baby polar bear is

called a cub. They are

born without teeth and drink

the mother's milk

for the first few

months.

# Did you know?

Did you know that

black bears have black

skin? their fur is actual

clear but it looks

white because light

reflects off of it

Also polar bears can

grow to be up to 10

feet tall and weigh

up to 400 pounds.

polar bears are the

largest land animal

that eats meat, and

they can swim under

water for at least one

minute.

Now you know...

As you can see, there

is a lot + know about

polar bears.
